

The figure consists of three side-by-side panels, each showing a simulated density field of an interstellar medium. Each panel features a bright, irregularly shaped central region representing a molecular cloud core, surrounded by a complex, filamentary network of gas. The color scale on the right indicates the column density in g/cm², ranging from 10⁻³ (dark red) to 10⁻¹ (yellow). The panels are labeled with their respective adiabatic indices: γ = 1.01, γ = 1.10, and γ = 5/3.

$$\gamma = 1.01$$

$$\gamma = 1.10$$

$$\gamma = 5/3$$

Column Density (g/cm^2)
