

The figure consists of three side-by-side panels, each showing a simulated density profile of a galaxy cluster. Each panel features a central, bright, roughly spherical core that tapers off into a diffuse, filamentary structure extending horizontally. The background is filled with a complex, web-like pattern of filaments and voids, characteristic of a cosmological density field. The color scale on the right indicates the column density, with values ranging from 10^{-10} (dark red) to 10^{-8} (yellow). The panels are labeled with their respective adiabatic indices γ in the bottom left corner.

$$\gamma = 1.01$$

$$\gamma = 1.10$$

$$\gamma = 5/3$$
